

Your benefits when applying the GMP+ B2 standard

- The standard was drawn up in close cooperation with people with a lot of practical experience in controlling feed safety. The language used is appropriate for the target group;
- Internal operational processes are improved. There is less production waste and more personnel involvement. This leads to consistent results and better costs control;
- Participants in the GMP+ Feed Safety Assurance module gain access to Feed Support Products, such as risk assessments, fact sheets and the GMP+ Monitoring database;
- It provides a distinctive image. Participation in the GMP+ Feed Certification scheme strengthens your customers' image of your company's reliability;
- GMP+ FC scheme is the worldwide market leader. This makes worldwide sales possible.

The GMP+ B2 standard is a feed safety standard for:

The feed safety assurance of industrially-produced feed ingredients, including their storage, trading (sale) and any transport of the feed ingredients produced.

A feed ingredient is a product which serves, either as a straight feedingstuff or as a constituent part of a mix, as a feed irrespective of whether it has a nutritional value in the animal's rations. The ingredients may be of vegetable, animal or marine origin and may be organic or inorganic substances. This includes feed additives, feed materials and semi-finished products.

GMP+ B2

Production of Feed Ingredients

GMP+ International manages the unique GMP+ Feed Certification scheme (GMP+ FC scheme).

This certification scheme is focused on controlling feed safety and responsibility (GMP+ Feed Safety Assurance and GMP+ Feed Responsibility Assurance). The scheme consists of standards and of rules for certification.

GMP+ International has tailor-made standards for a number of specific target groups. Examples are those for companies engaged in the production of feed additives, trade or transport. GMP+ B2 is specifically intended for producers of feed ingredients (feed materials and feed additives). Certified companies are qualified as GMP+ approved suppliers.

Strengths of the GMP+ B2 standard

- Developed over a period of 20 years and based on extensive practical experience in controlling feed safety;
- Complies with the relevant EU Feed Hygiene Regulations;
- According to the latest insights: with respect to achieving feed safety (including ISO 9001, ISO 22000 and HACCP Codex Alimentarius). Although the structure of this standard is different to that of the ISO standard, combined use is relatively simple;
- It gives requirements for a complete prerequisite program, which supports a company in controlling risks;
- A GMP+ certificate is accepted by other (international schemes);
- It's part of the GMP+ FC scheme which covers the entire feed chain and in which about 12,100 companies participate worldwide;
- Available in a lot of different languages, such as English, German, Dutch, French, Spanish, Polish, Danish and Chinese.
