

330.564.2

The state, structure, dynamics and problems of the formation of the income generation in a transition changes in Ukraine were analyzed in this article. Income is determined to be the base of economy and have a decisive influence on society, but in Ukraine, the total share of social assistance is close to the total proportion of salary. For effective development of society proportion of the financial costs for social services should be transferred from the state to the regional level.
