DEAR AUTHORS AND READERS OF THE JOURNAL
«ECONOMIC BULLETIN OF SHEI USUCT»

We live in an amazing time of the fourth industrial revolution. Knowledge is becoming more accessible, network search standards – more versatile, endowed with the advantages of artificial intelligence, and research – multidisciplinary. Today, the top trend in the science is a fundamental economic research with elements of Data Science.

Such works were carefully selected by the editorial board in the first issue of the «ECONOMIC BULLETIN OF SHEI «UKRAINIAN STATE UNIVERSITY OF CHEMICAL TECHNOLOGY» journal in 2019, which I take great pleasure to present to you.

An experienced reader will find here a research in the field of finance and banking, energy and metallurgy, budget management and decentralization of modern economic education and European integration. And all this on the basis of Data Science methods: cluster analysis, mathematical statistics and stakeholder analysis.

Invite you to read and discussion.

Enjoy Science, Data Science.

Inna Strelchenko

PhD (Economic Sciences), Docent,

DSc Candidate, Department of Economic and Mathematical Modeling

State Higher Educational Establishment

«Kyiv National Economic University named after Vadym Hetman»,

Member of Editorial Board of «Economic Bulletin of SHEI USUCT»
