Dear friends, colleagues and admirers of science!

We, the organizers and participants of the International scientific analytical project of the IASHE, offer to your exacting attention the first issue of the journal «GISAP: Earth and Space Sciences».

This journal is «the first-born» of our project in the framework of which till now only collections of scientific works have been published. However, we decided to transform an array of topical creative swirls and thoughts of researchers from different countries into the original and long-term form to allow this valuable intellectual baggage not only be available to the wider international community, but to be subject to information distribution and archiving and also getting a strong potential for further development. Magazine format of publication of academic pursuits, as opposed to separate editions, determines a long-term analytical continuity of published materials. This format helps us to organize the continuous interaction, the dialogue between writers and readers.

That is why twelve international analytical journals devoted to various fields of science will be produced within the framework of GISAP and as we hope - rapidly developed.

We begin to implement our initiative through the present journal that specializes in issues of Earth and Space sciences. This fact is significant, albeit symbolically, and speaks about the inevitability of consistent development of any effective scientific research. But where should we start the study of our reality? We must start our move from a fundamental part of our Universe.

It is no mere chance that the starting point of our magazine format project is the objective sources of knowledge - Earth and space around it.

Thus, through the publication of this first journal of the project of GISAP we, like the mariners of the glorious past, are going to make a difficult and long journey through vast expanses of science. In this intellectual voyage with no horizon and final destinations we expect a lot of obstacles. But there is an unshakable conviction that the creative power of knowledge, the collective efforts of the participants of the international research project, as well as the initial global value of scientific research will not leave the sails of our «scientific frigate» without a fair wind.

We will not hood, hoping to find in every interested reader of this journal a curious thinker, a consistent critic, or a generator of ideas, that we would be glad to find the constructive partners willing to cooperate in the name of science, consolidation and cooperation of the international scientific community.

With respect and hope for effective cooperation, - Thomas Morgan
