

C O N T E N T S

<i>Ivan Chyr and Heorgiy Shynkarenko</i> Numerical modelling of temperature fields during impulse frictional hardening	3
<i>Yaroslav Garasym and Borys Ostudin</i> On practical attainment of preassigned accuracy of results in the process of numerical analysis of some two-dimensional integral equations	18
<i>Dmitri Koroliouk</i> The dynamics of recurrent statistical experiments with persistent non-linear regression and equilibrium	26
<i>Volodymyr Makarov and Denys Dragunov</i> Stability preserving structural transformations of systems of linear second-order ordinary differential equations	35
<i>Volodymyr Makarov, Denys Dragunov and Danyil Bohdan</i> Exponentially convergent numerical-analytical method for solving eigenvalue problems for singular differential operators	72
<i>Nataliya Mayko</i> The boundary effect in the error estimate of the finite-difference scheme for the two-dimensional heat equation	91
<i>Heorgiy Shynkarenko and Olexandr Vovk</i> A posteriori error estimations for finite element approximations on quadrilateral meshes	107
<i>Vitaliy Vasylyk</i> Exponentially convergent method for integral nonlocal problem for the elliptic equation in Banach space	119
