*The article is devoted to the research of the prospects of using scientific and technological means to identify and expose lies in obtaining information from participants in the investigation of a criminal offense. The obstacles of the procedural nature that prevent the use of the appropriate scientific and technical means in full are outlined. The reasons for the need to disseminate the use of technical means for detecting false information during pre-trial investigation are established.*

**Key words:** detecting lies, false information, lie detection, scientific and technical tools, information verification questioning, polygraph, kontrolohraf, voice stress analyzer.
