Valentina Dolgova (Russia, Estonia), Igor Groshev, Darya Pogontseva (Russia).

Human is something totally unique. Not because every one of us is Homo sapiens able to become aware of reality and exaggerating own originality and significance for the world around.

Probably, original essence of the man is mostly manifested in his specific process of cognition. The most fundamental part of the consciousness is formed in the process of creation – well-considered target-oriented activity. Such activity forms the personal intelligence through experience. In combination with sensitive emotionality intelligence predetermines personal inclinations to creative self-expression in various forms. Thus, a person is given a chance to perceive information, accumulate it, interpret, use it in practice and give birth to new semantic objects. Formal and logical uniqueness of such a system of information turnover in the mental field is in the following: semantic points of objective reality are not demanded by anyone except the man; a man acts as the only known subject of cognition; a man is the most significant object of self-actualization; a man is the only possible system of coordinates of cognition (he defines a goal, methods, systematization of cognition and practical forms of implementation of knowledge independently); only a man can use knowledge for artificial transformation of the world around.

We are capable of many things, but we are not ready to benefit from all ways of promotions of the progress. This is explained by the fact that all people are different, and the progress requires social unity. Inability of every certain person to fully understand own self and reach harmony with it is a source of the majority of modern social problems. Only adequate level of self-understanding promotes optimal inclusion of the person into the system of social life.

«* - Liberal – the issue belongs to the initial stage of the journal foundation, based on scientifically reasonable but quite liberal editorial policy of selection of materials. The next stage of development of the journal («Professional») involves strict professional reviewing and admission of purely high-quality original scientific studies of authors from around the world».
